No. 9193

# REGISTRATION EXAMINATION, JUNE 2009 GASFITTING

ANSWER SCHEDULE

(a)	They must cross at an angle of not less t	han 45°
	They must have a vertical separation of	not less than 100mm. (2 marks)
(b)	Poor combustion leading to sooti	ng in base of heater
	Poor flue gas dilution leading to c	verheating of the flue
	<ul> <li>Possible <u>spillage of products</u> into</li> </ul>	cupboard
	Poor heater efficiency	
	<u>Carbon monoxide present</u> in flue	gas (Any 2, 1 mark each), (2 marks)
(C)	Overgassing and underaeration (lack o	of air).
	High gas consumption.	(2 marks)
(d)	Wind direction to avoid downdraught.	
. ,	500mm clearance from roof.	
	For a flat roof, not able to harm persons,	i.e. 2 m above roof. (Any 2, 1 mark each), (2 marks)
		Total 8 marks
ANS	SWER 2	
<b>ANS</b> (a)	SWER 2 Not less than 20mm per m run. (accept eq	
		(1 mark)
(a)	Not less than 20mm per m run. (accept eq Light appliance and <u>allow it to reach worki</u>	(1 mark) ng temperature smoke taper, in front of the heater hood and <u>check that</u>
(a)	Not less than 20mm per m run. (accept eq Light appliance and <u>allow it to reach worki</u> Hold a <u>cool surface</u> such as a mirror, <u>or a</u>	(1 mark) <u>ang temperature</u> <u>smoke taper</u> , in front of the heater hood and <u>check that</u> <u>it into the room</u> .
(a)	Not less than 20mm per m run. (accept eq Light appliance and <u>allow it to reach worki</u> Hold a <u>cool surface</u> such as a mirror, <u>or a</u> <u>products of combustion are not passing ou</u>	(1 mark) <u>ang temperature</u> <u>smoke taper</u> , in front of the heater hood and <u>check that</u> <u>it into the room</u> .
(a) (b)	Not less than 20mm per m run. (accept equilibrium) Light appliance and <u>allow it to reach working</u> Hold a <u>cool surface</u> such as a mirror, <u>or a</u> <u>products of combustion are not passing ou</u> Flue gas detector may be used instead of	(1 mark) <u>ang temperature</u> <u>smoke taper</u> , in front of the heater hood and <u>check that</u> <u>it into the room</u> . cool surface or taper.
(a) (b)	Not less than 20mm per m run. (accept equilibrium) Light appliance and <u>allow it to reach working</u> Hold a <u>cool surface</u> such as a mirror, <u>or a</u> <u>products of combustion are not passing ou</u> Flue gas detector may be used instead of Any four of the following 1mark each:	(1 mark) <u>ang temperature</u> <u>smoke taper</u> , in front of the heater hood and <u>check that</u> <u>it into the room</u> . cool surface or taper.
(a) (b)	Not less than 20mm per m run. (accept equilibrium) Light appliance and <u>allow it to reach working</u> Hold a <u>cool surface</u> such as a mirror, <u>or a</u> <u>products of combustion are not passing ou</u> Flue gas detector may be used instead of Any four of the following 1mark each: Insulation of the room,	(1 mark) <u>ang temperature</u> <u>smoke taper</u> , in front of the heater hood and <u>check that</u> <u>it into the room</u> . cool surface or taper.
(a) (b)	<ul> <li>Not less than 20mm per m run. (accept equals to reach working the appliance and allow it to reach working the accept equals a mirror, or a products of combustion are not passing out of the gas detector may be used instead of the following 1 mark each:</li> <li>Insulation of the room,</li> <li>Airflow through the room,</li> </ul>	(1 mark) <u>ang temperature</u> <u>smoke taper</u> , in front of the heater hood and <u>check that</u> <u>it into the room</u> . cool surface or taper.
(a) (b)	<ul> <li>Not less than 20mm per m run. (accept equilibrium)</li> <li>Light appliance and <u>allow it to reach working</u></li> <li>Hold a <u>cool surface</u> such as a mirror, <u>or a products of combustion are not passing out</u></li> <li>Flue gas detector may be used instead of</li> <li>Any four of the following 1mark each: <ul> <li>Insulation of the room,</li> <li>Airflow through the room,</li> <li>Setting of gas rate,</li> </ul> </li> </ul>	(1 mark) <u>ang temperature</u> <u>smoke taper</u> , in front of the heater hood and <u>check that</u> <u>it into the room</u> . cool surface or taper.
(a) (b)	<ul> <li>Not less than 20mm per m run. (accept equilibrium)</li> <li>Light appliance and <u>allow it to reach working</u></li> <li>Hold a <u>cool surface</u> such as a mirror, <u>or a products of combustion are not passing out</u></li> <li>Flue gas detector may be used instead of</li> <li>Any four of the following 1mark each: <ul> <li>Insulation of the room,</li> <li>Airflow through the room,</li> <li>Setting of gas rate,</li> <li>Burner aeration rate,</li> </ul> </li> </ul>	(1 mark) <u>ang temperature</u> <u>smoke taper</u> , in front of the heater hood and <u>check that</u> <u>it into the room</u> . cool surface or taper.
(a) (b)	<ul> <li>Not less than 20mm per m run. (accept equilibrium)</li> <li>Light appliance and allow it to reach working</li> <li>Hold a cool surface such as a mirror, or a products of combustion are not passing outers.</li> <li>Flue gas detector may be used instead of</li> <li>Any four of the following 1mark each: <ul> <li>Insulation of the room,</li> <li>Airflow through the room,</li> <li>Setting of gas rate,</li> <li>Burner aeration rate,</li> <li>Flue draught,</li> </ul> </li> </ul>	(1 mark) <u>ang temperature</u> <u>smoke taper</u> , in front of the heater hood and <u>check that</u> <u>it into the room</u> . cool surface or taper.

#### (d) The burner is over gassed

The burner is short of air

Flame vitiation

Flame impingement

Blocked flue

(Any 2, 1 mark each), (2 marks)

# Total 9 marks

# ANSWER 3

- (a) <u>Rigidly mounted</u> on a permanent structure
  - Clearance or protection at back of heater
  - <u>In area of good ventilation</u>, no overhangs
  - <u>Close as possible to major uses</u>
  - <u>Clear of openings</u> into building
  - <u>Clear of trees and other vegetation</u>
  - <u>Clear of physical damage</u> or with protection barrier
  - Flue clear of neighbouring property
  - Clearance from gas meter
  - Not causing nuisance

(Any  $6 - \frac{1}{2}$  mark each)

#### **Total 3 Marks**

#### **ANSWER 4**

(a)	(i)	Atmospheric pressure will be lower at level 15 than at ground level	(1 mark)
	(ii)	Natural Gas gauge pressure will be higher at level 15	(1 mark)
	(iii)	The pressure will be <u>lower at level 15</u> as <u>LPG is heavier than air</u> .	(2 marks)

- (b) Any four, 1 mark each
  - Inadequate pipe sizing
  - <u>Blockage in pipework</u> due to dust (corrosion), water, or other material
  - Addition of a high consumption appliance increasing demand
  - Fault at Point of Supply (meter, supply regulator, cylinder empty)
  - <u>Fault upstream of POS</u> service capacity or cylinder size/evaporation

(4 marks)

#### **Total 8 Marks**

- (a) Any three, 1 mark for method and 1 mark for material protected.
  - Galvanising Iron/steel
  - Tape wrapping Iron/steel, copper
  - Plastic coating Copper/steel/aluminium
  - Cathodic protection Steel
  - Painting Iron and steel

#### (b) (i) Filter

- (ii) Pressure Regulator
- (iii) Low gas pressure detector
- (iv) 3-way valve

(4 marks)

**Total 10 Marks** 

(6 marks)

#### **ANSWER 6**

(a)	(i)	Volume of pip = 0.7854 × d <sup>2</sup>		
		= (0.7854 × 3 = 0.0153 + 0 = 0.0266 × 10 = <u>26.6 litres</u>		1000 × 40) (3 marks)
(ii)	As the	e volume is <u>les</u>	s than 30 litres, appendix D applies.	(1/2 mark each), (1 mark)
(b)	Flue s	surface area	= 3.142 × d × Height	
			= 3.142 × 0.150 × 12	
			= 5.652 m <sup>2</sup>	(2 marks)
	Weigh	nt of flue pipe	= 5.652 × 25	
			= <u>141.43 kg</u>	(1 mark)
				Total 7 Marks

(a)	1 ma	rk for each stage as shown	
	Test	dial = 60/5 = 12 rev/hour	(1 mark)
	Cons	umption = 12 x 0.05 = 0.60 m <sup>3</sup> /hr	(1 mark)
	Ener	gy input = 0.06 x 40 = 24 MJ/hr	(1 mark)
	Ener	gy Output = input x efficiency = 24 x 0.70 = 16.8 MJ/hr	(1 mark)
	Outp	ut in kW = 16.8/3.6 = <u>4.66 kW</u>	(1 mark)
(b)	Energ	gy passed would Increase	(1 mark)
ANS	WER 8	}	Total 6 Marks
(a)	All th	ree of the following, 1 mark each	
	-	Proper operation of the appliance	
	-	Proper operation of the flue system	
	-	Maintain safe ambient conditions	(3 marks)
(b)	(i)	Drawing showing key aspects, (1 mark each)	
		<ul> <li>Heat exchanger</li> <li>Fan (with air coming in)</li> <li>Room Air flow</li> <li>Gas and Products of combustion flow</li> <li>General layout of heater</li> </ul>	
	(	Products	
			Heated Air
	Fa	an Heat exchanger Gas	
			(5 marks)

(ii) Four heaters spread around the supermarket and <u>suspended at high level</u> with <u>flues to</u> <u>the outside</u> atmosphere

(1 mark each), (2 marks)

# Total 10 Marks

(a)	(i)	Overheat shut off	
		Type: <u>Bi-Metal</u>	
		Purpose: To shut off gas if thermostat fails	(2 marks)
	(ii)	Thermostat	
		Type: Snap acting rod and tube	
		Purpose: Senses the water temperature and controls the gas to the burner	(2 marks)
	(iii)	Flame Failure	
		Type: <u>Thermo-electric</u>	
		Purpose: <u>Monitors pilot flame</u> and <u>shuts all gas off</u> if pilot goes out	(2 marks)
(b)	(i)	To <u>establish that combustion fan is running before gas is turned on</u> and to <u>shut t</u> <u>down if fan fails</u>	he burner
			(2 marks)
	(ii)	To allow the pressures to be set separately and to ensure that the pressures ren constant to both main and pilot burner. To ensure pilot flame is not affected when flame is established.	
			(2 marks)
(C)	<u>Approp</u>	oriate size	
	<u>Swept</u>	<u>clean</u> of soot and other debris	
	Sound	and free from leaks	
	<u>No dar</u>	npers or other obstructions	
	<u>Not us</u>	ed for any other purpose	
	Has <u>sp</u>	pace for loose material to collect below appliance flue spigot	
	Has <u>go</u>	ood pull and no down draughts	
	ls <u>term</u>	inated in a safe location	
	Of solid	d construction	

(Any 5 – 1 mark each), (5 marks)

**Total 15 Marks** 

#### Gasfitting 9193 Answers, June 2009

#### **ANSWER 10**

(a) A flueless space heater <u>discharges the products of combustion into the room</u>. The products <u>contain water vapour</u>. The <u>water vapour condenses when it comes into contact with a cool</u> <u>surface</u> such as windows.

(3 marks)

(b) <u>Increasing ventilation to allow products to escape</u> to outside air will reduce the condensation

(1 mark)

#### **Total 4 Marks**

# **ANSWER 11**

(a) <u>They do not contain poisonous gases</u> such as carbon monoxide

(1 mark)

(b) Leaking gas can <u>catch fire (explode)</u> and can <u>cause suffocation</u> due to lack of air.

(2 marks)

1	~ )
- V	<u> </u>

Type of gas	Natural gas	LPG
Main constituent(s)	Methane	Propane
		Butane
Relative density compared with air	0.5 – 0.7	1.5 – 1.9
Heating (calorific) value (MJ/m <sup>3</sup> )	38-44	90 to 110
Volume of air required for combustion of 1 cubic metre of gas	9 to11	22 to 27
Lower explosive limit (% gas in air)	4 to 6	2 to 3.5
Upper explosive limit (% gas in air)	14 to16	8 to11

Answers for one gas type only required.

Any answer within range shown 1 mark each. Deduct 1 mark if gas type not selected

(6 marks)

**Total 9 Marks** 

- (a) Any 5 of the following:
  - Name or mark of appliance supplier
  - Identification of type and model
  - Gas type
  - Max and min gas supply pressure
  - Burner pressure
  - Max overpressure
  - Input rating

(1 mark for each), (5 marks)

(b) (i) Pipework test is to ensure the <u>pipework is gastight before connecting any appliances</u> (2 marks)

(ii) Installation test is to ensure the entire <u>installation</u>, <u>including appliances</u>, <u>is gastight before</u> <u>connection to the gas supply</u>

(2 marks)

(iii) Leakage test is carried out on <u>existing gas installations</u> before work is started to ensure <u>the installation does not have a significant leak</u>.

(2 marks)

**Total 11 Marks**
